

In real-time, see what docks have vehicle restraints in Bypass mode.

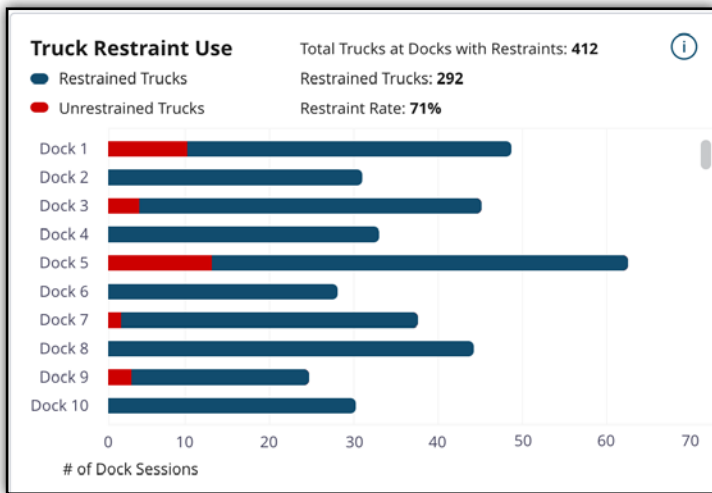

Receive text/email notifications of restraints in Bypass mode or doors open without a trailer present.

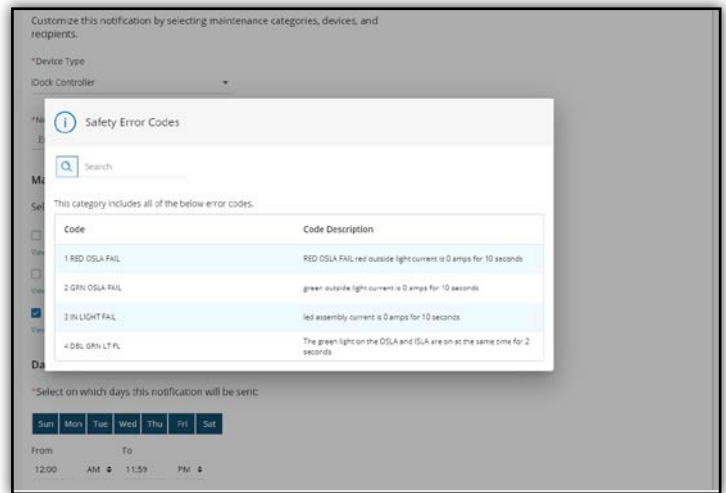

Utilize an iDock Controller to interlock the restraint with other dock equipment, as well as incorporate a 3-color light communication system for safe conditions.

Evaluate any truck-at-dock session to review restraint usage or door open without a trailer present.

Analyze restraint usage over time at each dock to ensure a goal is met for percentage of restrained trailers.

Receive alerts of any safety fault codes from the iDock Controller, such as errors with communication lights.
